

# oxeon - Press Release

---

## **Oxeon Presents at Global Carbon Fibre Outlook**

Oxeon will present thoughts on how to improve the efficiency of the carbon fibre value chain and make more fibre available in the market. The growing demand and the lack of capacity is a frequently discussed matter among users and producers of carbon fibre reinforcements. Oxeon will discuss new technologies that will have positive effects on both the availability of carbon fibre reinforcements and the cost, if used in a larger scale.

For those who do not have the possibility to participate at the conference in Budapest at the 4-6 October, hosted by Intertech-Pira Oxeon will make certain parts of the presentation available at [www.oxeon.se](http://www.oxeon.se) after the conference. You are also welcome to contact Henrik Olofsson (Business Development Manager) at +46 709 626 046 for more information.
